Our Story

The horse you see in the picture above is Buster. He died of colic in 2008. He was a beloved horse who was definitely a part of our family. He helped teach our daughter and hundreds of other children to ride in our summer camps. He was a very gentle soul.

That morning he was lying down in his stall. We managed to get him on his feet and in the trailer to the vet 15 minutes away. The vet gave the standard muscle relaxant and mineral oil. We were there all day, until he said to take him home and see if he makes it. He didn't.

This very difficult loss propelled us to find a solution. It has meant the world to us that Buster did not die in vain. We did not save our 4 legged family member, but now you can.

-Reba & Larry

ALL NATURAL INGREDIENTS CAN DO NO HARM.

1. HORSE IN DISTRESS?

Is your horse pawing, or biting at their stomach? Are they not interested in food? Do you hear gut sounds?

2. DON'T LET THEM ROLL!

If your horse is in distress, it's most likely due to an impaction. Impactions are when there's a blockage in the colon, which leads to rupture. It's important they don't roll - a twist may occur.

Impaction colic is the #1 killer of horses.

3. DON'T MASK SYMPTOMS!

Impactions cause the digestive system to stop because of the back up. Pain relievers only mask the symptoms, but they actually cause the digestive system to slow down even more. And mineral oil takes hours to get to the impaction, and only coats it instead of breaking it apart.

4. SOLVE THE PROBLEM!

After the horse swallows the formula, it's quickly absorbed into the bloodstream. These ingredients assist in working with the horse's body through osmosis to help draw fluids back into the intestine, thereby softening the impaction and assists in stimulating bowel movements. In 30 minutes, listen for gut sounds. They should be returning and your horse improving.

With a 3 year shelf life and no temperature control—Keep it on your shelf!

PRODUCT IS MANUFACTURED IN THE USA
